EDUCATION

Rutgers University - New Brunswick

Bachelor of Science in Computer Science

New Brunswick, NJ

Expected graduation : May 2028

WORK EXPERIENCE

Co-Founder & Full-Stack Data Engineer

Mar 2023 – Dec 2023

Carrierfree

Seoul, South Korea

- Designed and built a **full-stack MVP** for a jacket rental service from the ground up, developing the user interface with **HTML5**, **CSS**, and **JavaScript**, and integrating reservation logic, real-time availability tracking, and backend data storage using **Flask**, **AWS EC2/S3**.
- Developed **RESTful APIs** and structured client-server communication, ensuring stable data transactions and future scalability.
- Validated MVP with **500+ unique visitors** in 2 months; analyzed **user behavior data** to improve the overall user experience and reduce drop-offs.
- Collaborated in a small agile team of 3 developers, participating in sprint planning, async coordination, and code reviews.

IT & Data Support Associate

Dec 2022 – Sep 2024

Seoul Metropolitan Fire & Disaster HQ

Seoul, South Korea

- Built and maintained **SQL-based ETL pipelines** for 20+ years of operational data, enhancing data quality and enabling faster emergency response analytics.
- Streamlined HR data workflows for **200+ employees** using Excel automation, reducing manual processing and improving data consistency across systems.

PROJECTS

NYC Sublet Platform | Next.js, React, Supabase, Tailwind CSS

Apr 2026 – Present

- Identified an underserved market gap between NYC university subletters and long-term travelers; designed and built a full-stack listing platform from scratch with **Supabase**-powered auth, image storage, and relational database.
- Engineered an **AI-assisted development workflow** using **Claude Code**, decomposed every feature into atomic tasks with persistent context tracking, minimizing hallucinations and reducing estimated development time **from 8 weeks to 2**.
- Structured codebase with function-level commits to isolate errors and streamline debugging, enabling rapid iteration and maintaining clear traceability across the full stack.

AI Resume Analyzer | Flask, Groq API, LLaMA3, Bootstrap, Jinja2, Render

May 2025 – Jun 2025

- Built a **Flask-based web service** to analyze resumes and job descriptions, including PDF text extraction and transformation into structured data.
- Implemented a semantic similarity pipeline to match resumes to job descriptions, using embeddings via **Groq API** + **LLaMA3**.
- Deployed the app using **Render** with modular templates and Bootstrap-based UI for usability.

Reddit-style Backend Clone | FastAPI, PostgreSQL, SQLAlchemy, Docker, Typescript

Jun 2025 – Aug 2025

- Developed backend endpoints for user signup, login, post creation, and commenting using **FastAPI** and **SQLAlchemy**.
- Containerized the application using **Docker** and connected it with a **PostgreSQL** database to simulate a scalable production environment.
- Designed and enforced database schema and validation logic using **Pydantic**, ensuring data integrity.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL(PostgreSQL), HTML5, CSS, JSON, C

Frameworks: FastAPI, Flask, Bootstrap, Jinja2

Developer Tools: Git, GitHub, Docker, AWS (EC2, S3), Azure, Render, Uvicorn

Libraries: SQLAlchemy, Pydantic, bcrypt, PyTorch, TensorFlow, Matplotlib, Scikit-learn

Soft Skills: Teamwork, Strong communication, Analytical thinking, Troubleshooting
